RESIDENTIAL INTEGRATED SOLAR ENERGY SYSTEMS

STYLE + SIMPLICITY

WHY UNI-SOLAR®?

Besides the advantages of providing an aesthetically pleasing, easily installed, virtually indestructible solar solution, UNI-SOLAR® is the world leader in thin-film solar technologies. It's a company with years of experience in photovoltaics and is backed by a U.S. technology leader in renewable energy, Energy Conversion Devices, which holds 350 U.S. patents and 800 foreign patents. Our technology has proven itself over decades and under the most extreme conditions imaginable, including satellites, ocean buoys and military applications.

Adding a UNI-SOLAR® roof to your home is a way to make it more energy efficient, more comfortable and more “green.” It’s an easy, hassle-free way to invest in your home’s value and your family’s future. Every residential system comes with a 20-year warranty on power output and a 5-year system warranty.

You won’t find a company that is more experienced or more reliable. So, when you add it all up, a UNI-SOLAR® residential system is a great investment and the best choice for a solar electric system that really works with the look of your home.

PRICELESS + PROFOUND
FINALLY.
SOLAR + ATTRACTIVE
IS NOT A
CONTRADICTION
IN TERMS.

Introducing UNI-SOLAR® shingles, laminates, and racks, the solar electric solution that won’t compromise the look of your home. In fact, these systems are so thin, so unobtrusive and so easily installed, they’re no compromise at all. And they provide an infinitely renewable, virtually indestructible source of power.

SYSTEMS THAT CONFORM TO YOUR STYLE, NOT THE OTHER WAY AROUND

Unlike traditional solar, UNI-SOLAR® residential solutions integrate with the look of your home. UNI-SOLAR® systems are more durable because our laminates are made with flexible, thin stainless steel, not glass. UNI-SOLAR® solar electric roofing systems deliver “best in class” for both low-light performance and high-temperature performance. Plus, they come with a 20-year warranty on power output and a 5-year system warranty.
BUILDING INTEGRATED SOLAR ELECTRIC SHINGLES
Only UNI-SOLAR® offers shingles that look and install just like ordinary shingles, but allow your roof to evolve from mere protection from the weather to a source of solar electric power. These shingles have been honored with the Popular Science Grand Award, “Best of What’s New,” and with Discover magazine’s “Technological Innovation Award.”

BUILDING INTEGRATED SOLAR ELECTRIC LAMINATES
This metal panel roofing combines the appeal of a structural roofing product with the solar electric capabilities of photovoltaics. It enhances a standard metal roof with a power system that is durable, beautiful and best of all, functional.

SOLAR ELECTRIC RACKS
Gone are the days of unattractive glass solar panels which are heavy, easily broken, and often subject to vandalism. The modern UNI-SOLAR® residential systems available today are lightweight, virtually unbreakable, are durable even in heavy hail conditions, and actually add to the value of your home.
WHY SOLAR?

Utility costs are soaring. Demand for power has risen more than 60% in the past 27 years. Electric power plants are the number one source of industrial pollution in the United States. So, whether you’re considering solar because it can save you money, ensure you have power during outages, or because you want to have less impact on the environment, UNI-SOLAR® solutions are the intelligent, infinitely renewable choice for any home.

Depending on the system you choose and where you live, you can reduce your utility costs up to 90% or even eliminate your electric bill entirely. In fact, when your solar production exceeds the demands of your own home, your meter actually spins backwards — the utility company credits you for the power you produce! Not to mention, in many states and countries there are significant incentives and rebates for people who have solar electric systems installed, so your up-front investment could be reduced by as much as 50%. The time has come. Now, solar is an attractive and affordable solution.
RESIDENTIAL SYSTEMS
Residential turnkey systems.
Complete residential solar electric systems and solutions.

COMMERCIAL/INDUSTRIAL SYSTEMS
Lightweight, easily installed, solar electric solutions that can be integrated with a variety of roofing materials.

CONSUMER PRODUCTS
A complete line of advanced products for the marine, camping and recreational markets.

OFF-GRID AND REMOTE APPLICATIONS
Electricity for remote areas of developing countries.

SPECIAL PROJECTS
Engineered solutions for oil pumping, telecommunications and water irrigation.
